EU citizen (Italian) — full EU work authorization, no visa or sponsorship needed

SUMMARY

Java 17 / Spring Boot backend developer. Designed and built the REST API, JWT authentication and role-based access of a team-built, multi-tenant SCADA platform, with JUnit 5 tests over its alert state machine. At Codisys, shipped a Python automation that ran unattended in production and wrote SQL against live SQL Server schemas. Secondary backend experience in Go (gRPC, Kubernetes).

TECHNICAL SKILLS

- Languages: Java 17, SQL, Python, JavaScript / TypeScript, Go, C#
- Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security (JWT), RBAC, REST APIs
- Testing, build & methods: JUnit 5, Mockito, Maven, layered architecture, Agile / Kanban
- Databases: PostgreSQL (transactions, migrations, Row Level Security), SQL Server, MySQL, MongoDB
- DevOps: Git, GitHub Actions (CI/CD), Docker (multi-stage builds, Compose), Linux
- Cloud & frontend: familiar with Kubernetes and AWS (EKS, RDS); React, Vite (supporting)

PROJECTS

AquaSense — Industrial SCADA SaaS Platform (team project)

github.com/GabrielBudoia/aquasense

Java • Spring Boot • Spring Data JPA • Spring Security (JWT) • PostgreSQL • JUnit 5 • React • Python

- Designed and built the REST API and JWT authentication of a layered, multi-tenant Spring Boot backend for water-treatment plants, isolating 3 access levels (Admin / Operator / Viewer) per project and per user.
- Implemented the full alert lifecycle (create, acknowledge, silence, assign, resolve, with comments) and an audit log of every operator action.
- Modelled sensor readings, threshold rules and alert state with Spring Data JPA; readings ingested every 5 seconds fire per-tenant alerts, with SMTP notifications and CSV export endpoints.
- Tested the alert state machine and threshold logic with JUnit 5, catching invalid state transitions before release.
- Built the React 18 + Vite frontend and a Python sensor simulator for end-to-end tests without PLC hardware.

Industrial Effluent Pre-Sizer — Multi-tenant SaaS (solo, in development)

github.com/GabrielBudoia

React • TypeScript • Supabase (PostgreSQL) • Row Level Security

- Building a config-driven sizing engine (a new industrial sector ships as config, not code) with per-company isolation via PostgreSQL Row Level Security; winery vertical validated with a senior environmental engineer.

Go Distributed-Systems Projects (personal)

github.com/GabrielBudoia

- pgfleet (gRPC control plane driving Kubernetes StatefulSets via client-go), dbwatch (NATS JetStream health pipeline with OpenTelemetry), backup-orchestrator (leader election, MongoDB job store, S3, Helm chart).

PROFESSIONAL EXPERIENCE

IT Support Technician and Internal Developer — Codisys, Spain

Jun 2025 – Jul 2026

- Built and shipped a Python automation (SQL Server via pyodbc, Pandas, Microsoft Graph API) scheduled on GitHub Actions, cutting ~20 minutes of daily manual reporting work to zero; it ran unattended in production.
- Contributed fixes and features to the production .NET codebase under senior developer supervision.
- Wrote raw SQL against production SQL Server schemas for operational reporting and incident tracking.
- Diagnosed and resolved incidents in a high-availability environment under strict SLAs, with senior teams.

E-Call Support Specialist — Bosch, Spain

Dec 2024 – Mar 2025

- Handled time-critical e-call incidents under strict SLAs in a trilingual environment (PT / ES / EN).

Accounting Assistant — SumUp, São Paulo, Brazil (part-time, hybrid)

Feb 2022 – Sep 2022

- Wrote Python web-scraping scripts that replaced manual data entry from external portals.

EDUCATION

BSc Computer Engineering (in progress) — Universitat Oberta de Catalunya (UOC), online

Sep 2026 – Present

Higher Technician in Multiplatform Application Development (CFGS DAM)

2024 – May 2026

- Upgrade Hub, Madrid • EQF level 5 • Final grade 7.78/10 • Modules: Programming (Java), Databases, Data Access, Services and Process Programming.

Courses (Udemy): Backend Master Class — Go, PostgreSQL, Kubernetes & gRPC (TECH SCHOOL) • Docker and Kubernetes: The Complete Guide
